

**Amendment to the Specification**

Please replace paragraph [0014] with the following new paragraph.

**[0014]** Embodiments can also have a second biasing mechanism 30 biasing the second pulley 11 away from the first pulley 10 so that both of the pulleys 10, 11 are tensioned away from each other, but again in a pivoting fashion, as opposed to the linear fashion of the prior art. A mounting plate 31 or the like can be employed between the second pulley 11 and the frame 16 in a fashion similar to that of the motor mount 14. The connection between the mounting plate 31 and the frame ~~45~~<sup>16</sup> is preferably freely pivotable. A linear spring 32, a torsion spring 33, or the like is preferably employed to provide the bias of the second pulley 11 away from the first pulley 10.
